

How Detrimental is the Unrelieved Debt During the Pandemic? The Case of Commercial Mortgages

Ludovic Phalippou¹, Heejin Yoon², Dayin Zhang²

¹Oxford University, ²UW-Madison

REALPAC/TMU Research Symposium Oct 2022

Motivation

- ▶ The COVID-19 pandemic has a devastating impact on economic activities
 - ▶ Expectation: push borrowers into financial distress
Mian et al., 2015; Piskorski and Seru, 2021
 - ▶ Response: large-scale debt forbearance
- ▶ What happened?
 - ▶ Household debt default dropped even below the pre-pandemic level
 - ▶ 70% said they could've made their payments, but just wanted a break from their normal payments.
Kapfidge, 2020
- ▶ Was the government too generous?

Residential Mortgage Delinquency Rate

Source: Cherry et al, 2021

Research Question

1. Would defaults surge during the pandemic if the debt is not relieved?
2. What real impact the debt defaults can generate?

- ▶ Empirical laboratory: **Retail Commercial Mortgages**

- ▶ Why Commercial?

- ▶ Commercial mortgage borrowers have no access to debt relief

- ▶ Why Retail?

- ▶ hit the hardest by the pandemic
 - ▶ track the business conditions of the retail stores accurately using up-to-date store visits (cellphone data)

Identification Strategy

Identification challenges:

1. Aggregate Trend: a mix of pandemic and policy effect
2. **Cross-sectional:** COVID-19 spread endogenously correlated with the socioeconomic characteristics

Solution:

1. Focus on the second wave of the COVID-19 after BLM protests
2. Exploit the exogenous variations of COVID-19 spread induced by the rainfall during the protests

The Death of George Floyd Sparked Unprecedented Nationwide BLM Protests

Note: the size of the circles reflects the number of protests.

The Second COVID-19 Wave in the US Following the BLM Protests

Preview of This Paper

1. Would defaults surge during the pandemic if the debt is not relieved?

- ▶ Rise of COVID-19 infections reduces customer visits to local retail stores, and leads to more closures of the retail businesses
- ▶ Spread of COVID-19 increased debt delinquencies and foreclosures of retail commercial mortgage borrowers

2. What real impact the debt defaults can generate?

- ▶ In defaulted commercial properties, in-line tenants' closures persist after their landlords' defaults.
- ▶ Mandated eviction moratoriums mitigate the closure of affected tenants.

Literature Review

Economic consequences of the public health crisis

- ▶ Agrawal et al., 2021; Albanesi and Kim, 2021; Alsan et al., 2021; Baker et al., 2020; Bartik et al., 2020; Coibion et al., 2020; Cox et al., 2021; Fuster et al., 2021; Horvath et al., 2021; Ling et al., 2020
- ▶ This paper studies the debt performance in an environment without debt relief interventions

Effect of debt relief programs in a public health crisis

- ▶ Cherry et al., 2021; An et al., 2021; Kim et al., 2021; Bandyopadhyay, 2021
- ▶ While all these papers look at the household debt, we focus on a counterfactual lending field where the debt forbearance is not available.

Real consequences of the debt distress

- ▶ Negative externalities Diamond et al., 2020; Campbell et al., 2011; Harding et al., 2009; Immergluck and Smith, 2006; Leonard and Murdoch, 2009; Lin et al., 2009; Rogers and Winter, 2009; Schuetz et al., 2008
Decrease local tax revenues Schuetz et al., 2008; Apgar et al., 2005 Violent crimes Baumer et al., 2012; Immergluck, 2011; Stucky et al., 2012
- ▶ This paper studies the setting of commercial properties.

Outline

1. Introduction

- Empirical Setting
- Data

3. Effect on Financial Distress

- Retail Visits and Closures
- Mortgage Defaults

4. Real Consequence

- Long-run Effect on Retail Closures

5. Conclusion

IV Strategy

- ▶ Why do we need an instrument?
 - ▶ The OLS results indicates the BLM protests are not randomly assigned to different counties.
 - ▶ The OLS analysis might suffer from serious omitted variable bias, even with the controlled regressions.
 - ▶ For example, protests tend to happen in politically liberal counties, where people practice better social distancing and mask wearing in response to COVID-19.
- ▶ Identification strategy
 - ▶ Instrument variable: rainfall during the following two weeks of the killing of George Floyd, conditional on historical rainfall level
 - ▶ weight each day by the total number of protests in the US
 - ▶ more rainfall \rightarrow less protests \rightarrow less COVID-19 cases

Outline

1. Introduction

2. Empirical Estimation

- Empirical Setting
- Data

3. Effect on Financial Distress

- Retail Visits and Closures
- Mortgage Defaults

4. Real Consequence

- Long-run Effect on Retail Closures

5. Conclusion

Data

- ▶ BLM Protest: The Armed Conflict Location & Event Data Project (ACLED)
 - ▶ collects the dates, actors, locations, fatalities, and types of all media-reported political violence and protest events globally.
- ▶ Rainfall: the PRISM Climate Group based at Oregon State University
 - ▶ daily precipitation estimates at any location in the US using weather station observations
- ▶ COVID-19 Case and Death Data: Johns Hopkins University CSSE COVID-19 Data
- ▶ Mobility: SafeGraph
 - ▶ measures the time people spend at or away from home using mobile phone GPS data
- ▶ Commercial Mortgage Data: Trepp CMBS
 - ▶ Loan-level characteristics and performances of commercial mortgages
- ▶ Demographic Data: MIT Election Data and Science Lab, American Community Survey (ACS), CDC

Summary Statistics

Conclusion

- ▶ We investigate the commercial mortgages for retail properties, where debt forbearance is not enforced.
- ▶ The widespread COVID-19 indeed leads to reduced customer visits to the retail businesses, thus a surge of debt defaults.
- ▶ more business closures in the defaulted retail properties in the following year, especially in areas where tenant eviction moratorium is not enforced.
- ▶ The real impact on the local businesses can be mitigated by either debt forbearance or eviction moratorium policy.

Thank You!

The Death of George Floyd Sparked Unprecedented Nationwide BLM Protests
